

The Moment to Care for Your Heart is Now

For only \$125, the Roper St. Francis Heart & Vascular Center offers three screenings that can bring you peace of mind and potentially save your life.

You will receive screenings for:

ABDOMINAL AORTIC ANEURYSM (AAA)

An enlargement in the lining of the main artery that leads from the heart to the lower abdomen. An AAA may cause internal bleeding or sudden death.

BLOCKED CAROTID ARTERY

The leading cause of stroke occurs when the carotid arteries in the neck become blocked with plaque and hinder blood flow to the brain.

PERIPHERAL ARTERIAL DISEASE (PAD)

Known as hardening of the arteries, it occurs when the arteries that supply blood to the arms and legs become clogged.

This test is highly recommended for individuals with one or more of the below vascular risk factors:

Age 60 or over • African American
Hypertension • High Cholesterol
Current or past smoker

To receive these lifesaving heart and vascular screenings, call (843) 720-5665.
